20 January 1961

25X1A9a

MEMORANDUM FOR:

FROM:

SUBJECT:

Investigation of reports which give Type
Designation Definitions

25X1A

NSA

25X1D1a

NSA 25X1

2. While it is realized that capacitors in themselves may not be of vital interest, since they may not be serialized, similar explanations of other electronic type designations may possibly be found in this type of material, which are of interest. The suggestion is thus put forward that, if it has not already been done, ST/PA's electronic type should have a chat with their opposite number behind the barrier, with a view of finding out if further material of a similar nature is contained in their files. Though possibly not directly usable in reports, it may act as a guide to interpretation of type designation systems. The above is just an idea and is put forward for whatever consideration you should wish to give it.
